

## **Flow of the Website - User Tasks**

### **Before starting the tasks:**

Step 1: After the installation process, you will see our welcome page as the first page. Please click the button at the bottom right to start the website.

Step 2: Please read/listen to the instructions on the initial page.

Step 3: Put headphones and cover your eyes fully if you are not visually impaired, then press the start button.

### **Tasks:**

Task 1: Listen carefully to the sound and follow the one that is most striking. Remember that sounds represent buttons. Please note that when you come closer to one button sounds will become louder and centralized. In addition, you will hear a "tic-toc" sound when you hover over a button. **Find the button on the bottom right of the page.**

Task 2: If you hear the "tic-toc" sound, you should be ready to click on the button. Click and go to the next page.

Task 3: When you enter the new page, you will hear a "ding" sound. This means you have successfully entered the page. Now, repeat Task 1 and click to go to the third page.

Task 4: Repeat Task 1 and click to go to the fourth and final page.

Other tasks: Our system is designed for visually impaired people, so our system will be designed as easy as possible. It is not a system with many functionalities as a normal website. As a result, there are not so many tasks to complete. But the major thing we want you to think about is described in the "How to navigate the system" section. We want you to think of our system as a room, think about how the system benefits the visually impaired people, and tell us your observations, experiences, and suggestions in the post-test questionnaire.
